

# WIRING FOR U25 RETRO KIT

**Blower Motor has a four pin connector.**

**Connect long Yellow to the connector found opposite the blue and black wire found on pin #2 of blower**

The kit for the retro of the U25 controller may need loose wiring for the fryer side. The fryer should already have the necessary connections to install the retro kit. In the event the fryer has been modified or the wiring can not be easy to identify then use this cable kit.
